1 The Experiment

I developed an experiment to study the effect of reputation systems on the emergence of cohesive relationships in (online) markets. The experiment let groups of six actors exchange units repeatedly in an abstract market to earn money. Thereafter, the subjects were asked to report on their relationships to the other five participants in the group using a gift game and a questionnaire. Please see the methods section of my thesis for a more detailed description.

2 Data Collection

The data were collected in the Experimental Laboratory for Sociology and Economics (ELSE, else.fss.uu.nl) at Utrecht University. Subjects were recruited using the subject pool of the lab. All subjects were invited to sign up for a session. Since groups of six were needed, up to 35 subjects could sign up for one of the seven sessions between February 17 and March 1 2023 and subjects who could not be assigned to a group were reimbursed for their time and asked to sign up for another session. More information about the recruited subjects can is attached at the end of this document. Note that we also recruited some pedestrians to fill up experimental session who do not appear in the recruitment system and thus neither in the statistics.

Participants were randomly seated in the lab and read and signed a consent form before starting the experiment. Next, participants were provided with printed instructions and on-screen explanation of the exchange interface. The experiment was implemented using otree and can be accessed via a GitHub repository (github.com/lenardst/MT_EcoEx_RS). I plan to publish the code in case the paper is published. If you need access to the code before that please reach out via lenard@strahringer.de.

3 Codebook

The original data is stored in *raw_dataset*. The data set obtains one row per subject and all rounds in a wide format. The sections of the experiment are *negotiation* and *scmeasure*. The round is indicated by the number following 'negotiation', while fround 1 is the practice round. For *scmeasure* is was technically only one round. Please see Table 1 a description of the variables.

Table 1: Variable names and descriptions

| Variable Name | Variable Description |
|-----------------------------------|---|
| participant.id_in_session | Identifier bet for the participant within the session |
| participant.code | Unique code assigned to the participant |
| participant.label | Label assigned to the participant with the first to |
| | numbers indicating the seat in the lab |
| participant.payoff | Overall payoff received by the participant rounded to |
| | 50 cents |
| participant.player_colors | Order of the colors as they were assigned to the other |
| | five players in ego's exchange interface |
| session.code | Unique code assigned to the session |
| session.config.rs | Setting for the session with 0 indicating baseline con- |
| | dition and 1 indicating the reputation condition |
| negotiation.1.player.quiz1 | Question to assess the subject's understanding of the |
| | game (question: If you agree to a trade that you re- |
| | ceive 10 units, is it guaranteed that you will receive |
| | at least 10 units?, correct answer no (0)). |
| negotiation.1.player.quiz2 | Question to assess the subject's understanding of the |
| | game (question: If you accept an offer, can another |
| | participant still accept an offer of yours in the same |
| | round?, correct answer no (0)). |
| negotiation.1.player.quiz3 | Question to assess the subject's understanding of the |
| | game (question: Assume you agreed with another |
| | participant to send 10 units. If you now decide to |
| | send 9 instead of 10 units, how many other partici- |
| | pants will learn about your decision?', correct answer |
| | 1 in the baseline condition and 5 in the reputation |
| | condition). |
| negotiation.2.player. | Identifier between 1 and 6 for the participant within |
| id_in_group | the group |
| negotiation.2.player.payoff | Payoff received by the participant in round 2 |
| negotiation.2.player.agreed | Boolean variable if the participant agreed to an ex- |
| | change |
| negotiation.2.player. ex- | Partner chosen by the participant for exchange |
| change_partner | |
| negotiation.2.player.send | Amount sent (agreed) by the participant |
| negotiation.2.player.receive | Amount received (agreed) by the participant |
| negotiation.2.player.deviation | Deviation of the participant |
| negotiation.2.player.deviation_pa | rtDerviation of the partner |

| negotiation.2.player.reason_no_ex | clifanthe participant did not exchange, they were | | |
|-----------------------------------|---|--|--|
| | prompted to give a reason: 1: I did not want to trade, | | |
| | 2: I could not trade with the preferred participant(s), | | |
| | 3: I ran out of time, 4: I was inattentive | | |
| negotiation.2.player.exchange_nu | misternk of the exchange made by the participant (1 for | | |
| I y | the first exchange per round, 2 for the second, and 3 | | |
| | for the third) | | |
| negotiation.2.group.id_in_subsess | id n entifier for the group within the subsession | | |
| | anges made by the group in the given | | |
| | round (between 0 and 3) | | |
| scmeasure.1.player.payoff | Unused field | | |
| scmeasure.1.player.gift1 to gift6 | Amount gifted by the participant to participant 1 to 6 | | |
| | gsxchange payoff of the participant (all rounds) | | |
| | Amount of gift remaining for the participant | | |
| scmeasure.1.player.gift_received | Amount of gift received by the participant | | |
| 1,0 | Id of the player randomly chosen to send gift to | | |
| | iftd of the player randomly chosen to receive gift from | | |
| scmeasure.1.player.close1 to | Questionnaire item on close/distant to player 1 to | | |
| close6 | 6: 0:very distant, 1:distant, 2:rather distant, 3:neither | | |
| | close nor distant, 4:rather close, 5:close, 6:very close | | |
| scmeasure.1.player.cohesive1 | Questionnaire item on united/divided to player 1 to | | |
| cohesive6 | 6, scale equivalent to close | | |
| scmeasure.1.player.team1 to | Questionnaire item on team-oriented/self-oriented | | |
| team6 | to player 1 to 6, scale equivalent to close | | |
| scmeasure.1.player.partners1 to | Questionnaire item on partners/competitors to | | |
| partners6 | player 1 to 6, scale equivalent to close | | |
| scmeasure.1.player.harmonious1 | Questionnaire item on harmonious/conflictual to | | |
| to harmonious2 | player 1 to 6, scale equivalent to close | | |
| scmeasure.1.player.age | Age of the participant | | |
| scmeasure.1.player.sex | Gender of the participant:0: female, 1:male, 2:Else or | | |
| | prefer not to say | | |
| scmeasure.1.player.major | Major of the participant | | |
| number_of_rounds | Number of rounds of negotiation the participant | | |
| | played | | |
| total_gifted | The sum of all gifts the participant sent | | |
| earnings_per_round | Earnings from exchange divided by the number of | | |
| | rounds | | |

THE EASE OF RECRUITMENT
